Introduction to Sedimentology

classification and petrographic identification of sedimentary rocks under the microscope, issues of provenance, diagenetic features common in clastic rocks Part 3: Chemical sedimentary rocks - Carbonate rocks- the water-carbonate system, carbonate depositional environments - continental shelves, carbonate ramps and platforms, basinal

Introduction to Clastic Sedimentology

Clastic sedimentology is the branch of geology that studies sediment and sedimentary rocks that are made up of particles that are the solid products of weathering at or near the Earth's surface Thus, clastic sedimentology is concerned with gravel, sand and mud and the rocks that form by the induration (formation into rocks) of these
